Preface

Play is the only occupation worthy of man. – Plato

This book is basically aimed at players rated between 1600 and 2200. Amateur players of this level can be seen in open tournaments everywhere. Among these players one can find successful lawyers, doctors, school teachers and university professors, businessmen, etc. Among them there are also, naturally, young players of a very high intellectual standard. For example, a few years ago while playing in a rapid tournament in the Arturo Soria shopping centre in Madrid, I got to know a girl whose rating was 1800 and whose IQ was 149. It has to be said that the passion for chess felt by amateur players often exceeds that of professionals. It is interesting to recall, in this respect, the response given by the Deputy Prime Minister of Mr. Gorbachov's last government, the academic and famous economist Leonid Abalkin. When a journalist from Soviet TV asked him 'how is it possible that you, who occupy such an important post, have time for chess?', this was his reply: 'It's true that I'm very busy all day long. However, after midnight it's my chess time. It's the same as when you are keen on a woman; you will always find the time to see her. In other words, for me chess is that woman.

The chess world is very varied and interesting because of the people represented in it. Although quite a lot is known about famous professional players, both men and women, information about amateur players hardly appears at all in chess magazines and books. It is for precisely this reason that I decided to begin this book with a chapter comparing these two categories of chess lovers and even include games played by amateurs in every chapter. Now I am going to comment briefly on the content of the remaining seven chapters of this book.

The essence of the second chapter is a model for choosing chess moves, which is based, on the one hand, on the usual division of chess content into two parts: tactics and positional play, and on the other hand, on the speed of thinking: fast and slow. It was a pleasure for me to encounter the book by Daniel Kahneman, winner of the Nobel Prize for Economics, despite his being a psychologist, because of his contribution to the topic of decision-making in the financial sector. The title of his book, translated into several languages, is very striking: Thinking, Fast and Slow. I believe that in this there is a certain coincidence between Kahneman's model and that

of the theoretical basis of my own doctoral thesis from 37 years ago – and this is not accidental: human thought works in the same way in various spheres, including chess. I must say that the book in general, as well as certain specific references that the Nobel prize winner makes to our game, deserves the attention of any chess player.

In the third chapter, on concrete, tactical play, my idea above all was to draw attention to playing blindfold, in other words without looking at the board. In tactics there are two major groups of situations: the search for candidate moves and the calculation of variations. And I think that any player knows even from his own experience that looking for moves ('what to do?') is often more complicated than calculating lines ('how to do it?'). Blindfold play helps to improve the way you visualise the board and, consequently, helps you to see more candidate moves. Nowadays there are many good articles and books on the technique of calculation, for example those by GM Jacob Aagaard. However, when applying that advice in practice you have to be very careful.

For the theme of the fourth chapter, on positional play, it is worth recalling the famous French mathematician Henri Poincaré, who claimed not to have an exceptional memory, nor to be a particularly good calculator, and therefore probably a bad chess player (!?). Poincaré attributed his scientific successes to his innate 'filter', which allowed him to search only where there was something worthy of investigation. It can be supposed that a player's 'positional sense' is of a similar nature to the aforementioned filter. And in order to improve that filter we must study not only the games of great players but also various positional themes in relation to what has taken place in our own games. And in this chapter, among other things, one of the themes of positional play is discussed: exchanging bishop for knight.

The fifth chapter is devoted to the topic of creativity. And it seems that this is precisely where the attraction of chess lies: 'It is not everyone who can write a play, or build a bridge, or even make a good joke. But in chess everyone can, everyone must, be intellectually productive and so can share in this select delight' (GM Siegbert Tarrasch). I believe that one of the criteria for a good game of chess at amateur level should be the presence of at least one 'homegrown' idea of your very own. In order to broaden the traditional view of creativity in chess, I have decided to include some exercises of a generic nature, although using chess material.

I believe that a player's resilience, which is the theme of the sixth chapter, is so important that it merits more space than is usually devoted to it in magazines and books about our game. In this chapter I present several typical situations where the weaker side saved a position which

was objectively lost. The history of chess gives us various examples of the importance of willpower in decisive moments. We need only recall the final games of the matches Kasparov-Karpov (Seville 1987) and Kramnik-Leko (Brissago 2004), when White needed to win the last game in order to retain the title of World Champion. There are many examples in presentday high-level competition, in particular in the games of the current World Champion Magnus Carlsen, or of those who have attempted to wrest the title from him. For example, the winner of the Moscow 2016 Candidates Tournament, GM Sergey Karjakin, clearly demonstrated the importance of this factor, both in that tournament and in his subsequent match against Carlsen. Karjakin had already shown his extreme resilience in the final game of the 2015 World Cup competition against GM Peter Svidler, which was a qualifying match for both of them for the Moscow tournament. In this match, Sergey, on more than one occasion, picked himself up after a defeat and responded with a victory. It is striking that GM Fabiano Caruana, winner of the following Candidates Tournament (Berlin 2018), played for a win in the final game, even though a draw already guaranteed him first place. There are some players who have a special gift for saving difficult or even lost positions, for example GM Valentina Gunina. The problem is that there is not, as far as I am aware, any verified method for improving a player's resilience. Extreme measures, such as, for example, bathing in the icy waters of the North Sea, as did GM Alexander Motyley, who got off to a bad start but eventually won the Wijk aan Zee 'B' tournament in 2006, could equally well give negative results.

There are many amateur players who fear their opponent's preparation in the opening. Certainly, the databases and modern analysis engines can frighten anyone. However, the reality is not so negative, as I have tried to show in the seventh chapter. In the first place, the topic of opening preparation has a history as long as that of chess itself; in other words, it is not a new topic. Besides, the human memory has its limits and no player is able to memorise everything. In the end, at least at amateur level, the opening – even though it does of course influence matters – in no way determines the result.

Endings are the subject of the eighth chapter. I think a beginner needs to have a kind of 'safety belt', made up of knowing a certain minimum number of positions and learning the typical methods that correspond to them. And as an example of this, I show 12 positions on the theme of rook and pawn against rook. Fortunately, nowadays there are a number of good books on the endgame: in particular GM Jésus De La Villa Garcia's '100 Endgames You Must Know', which, even though it goes beyond the minimum

knowledge required by an amateur, allows everyone to choose what suits his needs.

The final chapter presents the solutions to the many exercises which are interspersed throughout the book.

I share the following opinion with the sixth World Champion Mikhail Botvinnik: 'It is not possible to teach someone to play chess well, but this is something which can be achieved through one's own efforts'. This book is a book of reflections on chess, rather than an attempt to teach how to play well, and its aim is to demonstrate the richness and at the same time the difficulty of chess and the possible ways to get better at this game.

CHAPTER 2

Factors which determine success in chess

Tactics requires a keen eye and strategy requires thought. - Max Euwe

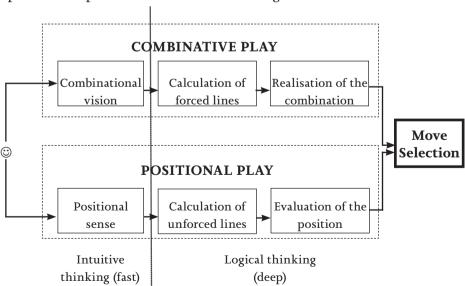

2.1 A model for choosing a chess move

Chess is a model of a military battle and it is therefore interesting to compare the thinking of a military commander with that of a chess player. As the eminent Russian psychologist Boris M. Teplov wrote: 'The ability to grasp what is really important, as well as a constant evaluation of the material, are the most important factors which allow the unification of analysis and synthesis, the authentic balance between the aspects of intellectual activity, those aspects that distinguish the intellectual activity of a good commander' (from the book The Mentality of the Military Leader). In this sentence, attention is drawn to the speed of thought in each case: grasp, which implies a rapid process, and permanent evaluation, which means thinking and reflecting throughout the whole battle. That same paper comes to a striking conclusion: 'An authentic military genius is at one and the same time a genius of the whole and of the details.' Translating this into chess terms, we can see the similarity to strategy and tactics. In order to clarify the content of the chess struggle, more than 35 years ago this writer worked out a model for move selection which also makes it possible to define the qualities that this struggle demands of the player. Undoubtedly, chess is a creative and artistic process and therefore any kind of model is relative. But at the same time, this game is an intellectual sport and it will be of use to any player to have an idea of the qualities and abilities which should be developed and how these qualities relate to each other and interact, and how the process can be visualised and represented.

The skills of calculating variations and evaluating positions are considered to be essential for success in chess. Nowadays, terms like combinative vision, positional sense, and mastery in combinative and positional play, etc., are often used in chess literature. Players and psychologists who are involved with our game are in the habit of using labels such as: quick grasp of the position, intuitive sense of the situation (Alekhine); conventional principles which the chess player employs consciously or unconsciously when selecting moves (Réti); positional sense (I. Diakov, N. Petrovsky & P. Rudik); the ability to see the main idea in any position and to understand the links between its important elements (V. Pushkin).

To get to the heart of the matter, let us consider the model based on the differentiation between two aspects of chess: combinative play and positional play; in other words, tactics and strategy. As can be appreciated from the diagram below, combinative play leads to a result based on combinative vision, which is related to the calculation of variations. Positional play implies the choice of a plan at a specific moment, and sometimes it coincides with the evaluation of a given position, that is to say that it is based on positional sense as much as on the calculation of variations. As both aspects interact in practical play, it is important to specify on the one hand what they have in common, and on the other hand what it is that makes them different.

As can be seen in the diagram, both combinative play and positional play have at least one element in common: the calculation of variations, which nevertheless has a different nuance according to how it is carried out in each case. In addition, they share in a hidden manner a common part of combinative vision and positional sense. At the heart of both lies the ability to grasp intuitively the situation on the board: in other words, a rapid understanding of the main idea of the position, without calculating any variations. It was exactly this quality that chess players and psychologists have described as the essential characteristic of the chess player. It is interesting to compare what Napoleon said about his military genius: 'With one quick glance I could understand all the difficulties of the matter, and at the same time the resources needed to overcome these difficulties; that was the root of my superiority over the others', with the opinion of Capablanca: 'In an instant I can guess what is hidden behind

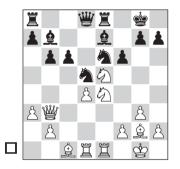

the positions and what can happen or what is going to happen. Other masters have to carry out analyses in order to obtain some results, while for me a few moments suffice.'

Two examples illustrate combinative vision and positional sense respectively.

Game 1 Garry Kasparov Vladimirov

Tallinn 1981

In this position, play continued:

1. \(\times \times 62 \times 62 \times 63 \times 64! \)

And White wins at least a pawn. It is worth noting that the decisive blow occurred in a five-minute blitz game. As a witness to this game, I can assure you that the future World Champion took no more than a few seconds to calculate this brilliant idea, which was not so obvious either.

Solutions discovered by positional sense do not usually provide a win of material, instead they lead to changes in the situation which determine the later development of the game. To a certain extent, positional sense can be considered as the main safety belt

that accompanies the chess player throughout the whole game and at every moment indicates the essence of the position, for example when you should attack and when defend, which pieces to exchange, etc.

The following rapid game in the positional style of the current World Champion is very significant. Despite the short time and the large number of moves played, Carlsen did not make any significant errors.

However, an intuitive grasp of the position is usually only the beginning of the thought process and not its end, and therefore it is no guarantee of a correct decision. One can suppose that mistaken intuitive decisions occur basically for two main reasons: when the chess player's prior experience does not provide him with a corresponding image of the position, because it is new to him, or when the position on the chessboard has differences that he does not distinguish from the image he has stored in his mind. This is demonstrated in the following two errors, made by world champions.

Game 3
Readers of Pionerskaya Pravda
Mikhail Tal

cr 1970

Tal played this correspondence game against the readers of the junior newspaper Pionerskaya Pravda and he decided to give his young opponents a wild and exciting game. Here is what he said about this position: 'I cannot remember such a strange position in a game, ending with the white queenside totally unmoved and the kingside completely devastated.' It seems

that for precisely that reason, the wizard of combinations found nothing better than giving perpetual check, as he could not find the mate that was later pointed out by a Moscovite schoolboy.

26...42g3+??

There was a win with 26... 2f4+! 27. \$\\$\\$h6 (27. \$\\$\\$h4 h5! loses more quickly) 27... \$\\$\\$g6+ 28. \$\\$\\$xh7 \$\\$\\$g7+ 29. \$\\$\\$h6 (29. \$\\$\\$h8 2\\$g6#) 29... \$\\$\\$g8! followed by mate on g6.

27.⊈h4

27... ව f5+

27...h5?? 28.\(\bar{2}\)f2+.

28.ஓh5 ⊘g3+

Draw.

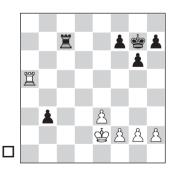

Game 4

Magnus Carlsen
Maxime Vachier-Lagrave

2872

2780

London Rapid 2019 (6)

35.罩b5?

This move, made in accordance with a famous rule about placing the rook behind the passed pawn, is in fact a serious mistake here.

It looks as though the World Champion, who among other things is a great endgame player, has not realised that the position of the passed pawn on the second rank changes everything. White could maintain equality with the less obvious 35.e4!, despite the fact that this allows Black to place his rook behind the passed pawn, which in most such positions constitutes a

37...h5 38.h3 \$f8

And after bringing up his king to the b2-pawn and beating off White's counterplay, Black won.

2.2 The qualities of the chess player

Since in chess literature there are no standard definitions of the specific qualities of a chess player, we shall try to suggest some here. Combinative vision is the quality which allows a player to find tactical ideas, as a rule connected to a sacrifice, in other words a sequence which can alter the usual correlation of the value of the pieces. Positional sense is the quality which allows a player to discover the main strategic idea of the position, which indicates the best position for one's pieces, taking into account the opponent's actions and thus creating the preconditions for an appropriate positional evaluation and, consequently, the choice of a plan.

In this paragraph, we shall limit ourselves to discussing only rapid thinking, leaving other elements of the model for a later analysis. In conclusion we should say that in today's chess, the value of fast chess, which basically has two forms, blitz (usually 3 to 5 minutes, with an increment of between 2 and 5 seconds) and rapid (usually between 15 and 30 minutes, often with the same increment as blitz), is growing in popularity. Nowadays, numerous championships for both these types of play are organised, including even world championships, with a separate Elo rating for each type. Fast chess has also entered the domain of classical slow chess as the usual way of deciding the winner when matches end in a draw. It was in exactly this way, in the form of rapid games, that two matches for the title of World Champion were decided in 2016 and 2018, after the classical matches had been drawn.

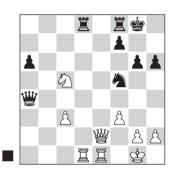

From my observations over many years I have come to the conclusion that it is in fast chess that the difference between titled and amateur players is most evident. Naturally, apart from a quicker and deeper grasp of the position, there are other factors: above all the expert's larger mental 'database', which includes not only greater knowledge of openings, endings and typical middlegame positions, but also a greater command of various

chess-psychology situations arising from the struggle over the board. Of course, titled players – even the strongest, as they too are mortal – also make serious mistakes. as for example in the following game.

Game 5 Hikaru Nakamura Levon Aronian

2772 2813

Saint Louis 2013 (1)

Now, after 30... ₩c6 the opponents would surely have agreed a draw. However, the game continued with...

winning the exchange in view of 31...罩fe8 32.约f6+.

Aronian: 'They teach beginners these things: if you see a forced variation, check that you're not missing something on the first move. I myself used to recommend this to my friends. I am ashamed of my move.' It is to be supposed that Aronian's mistake was the result of the relaxation that human beings often experience when 'the result is obvious'.

It is curious to recall another case with this brilliant player four years later, when both of the players suffered from chess blindness.

Game 6 Italian Game Sergey Karjakin

2785 2780

Levon Aronian Wiik aan Zee 2017 (7)

1.e4 e5 2.0f3 0c6 3. 2c4 2c5 4.0-0 There were two better alternatives here:

- A) 10... \(\bar{\pi} \) e8!? 11. \(\Data \) a3 (11. \(\Data \) xe5 \(\Data \) xc3! 12.bxc3 黛xb3 13.axb3 公xe5 with equality) 11... \(\hat{L}\)c5 12.\(\Delta\)c4 f6 13.d4 exd4 14.cxd4 \(\preceq\$f8 with chances for both sides, Ding Liren-Dominguez Perez, PRO League rapid 2020;
- B) 10...\deltad7!? 11.\Da3 (11.\Dxe5 ②xe5 12.罩xe5 罩ae8 with good compensation for the pawn) 11...罩ad8 12.公c4 f6 13.d4 exd4 14.∮xb6 cxb6 15.∮xd4 ≜f7 with equality, Alekseenko-Anand, Douglas 2019.

11.d4??

By means of an ugly but very strong move, 11.c4!!, White could have won a piece:

A) 11...皇xf2+ 12.曾xf2 公db4 13.d4 皇f5 14.d5 公d3+ (14...公a5 15.曾g1 公xb3 16.axb3 公c2 17.公h4!) 15.曾g1 公xe1 16.豐xe1;

B) 11... \(\textit{\textit{D}}\)db4 12.c5 \(\textit{\textit{L}}\)f7 13.cxb6. The players discovered this only after the game ended! Explaining his error, GM Karjakin said that he simply couldn't believe that one of the best players in the world could lose a piece as early as move 1!!

11... \(\textit{L}\)f7 12.dxe5 \(\textit{L}\)xe5 13.\(\textit{L}\)xd5
\(\textit{L}\)xd5 14.\(\textit{L}\)xe5 fxe5 15.\(\textit{L}\)e3 \(\textit{L}\)c6
And the activity of the black pieces compensates for the weakness of the e5-pawn.

Nevertheless, tactical errors of this kind are much more common in the games of amateur players.

Game 7 Italian Game

Amateur 1
Amateur 2

1.e4 e5 2.②f3 ②c6 3.Ձc4 Ձe7 4.d4 exd4 5.c3 dxc3?!

The rare $5... \triangle a5$ is a superior option.

6. ₩d5

I witnessed a game in the Spanish Women's Championship in 1994 where the player with Black resigned in this position. It is notable that in the Mega Database there are quite a lot of games where Black did the same, or else lost quickly after 6... £16??, 6...d6?? and 6... £25??. Nevertheless, the position is definitely playable for Black:

6... **公h6! 7. \$xh6 0-0!**

8. £xg7!

The obvious retreat 8. ②c1?! runs into the hidden 8...②b4! 9. 響h5 (9. 響d1? loses to 9...c2!) 9...d5! 10.exd5 (not 10. ②xd5? cxb2) and now:

- A) 10...\(\tilde{C}\)c2+?! 11.\(\delta\)d \(\lambda\)xa1 12.\(\tilde{D}\)xc3 with sufficient compensation is known since Maric-Janosevic, Zagreb ch-YUG 1953;
 - B) 10...cxb2!? 11.\(\hat{L}\)xb2 b5;
- C) $10...b5! 11. \triangle xc3 (11. \triangle xb5 \triangle c2+12. \triangle f1 c6! \mp) 11...bxc4! 12.0-0 \triangle f6 and the possibility of ... \triangle d3, giving Black the advantage.$

8... ⊈xg7 9. ©xc3 d6

And Black has reached a somewhat acceptable position.

Occasions when an amateur player defeats an IM or a GM are not

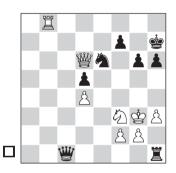

common and they happen usually for one of two main reasons: either the titled player blunders in an advantageous position or the amateur catches the titled player in an opening which he has prepared in advance. The latter happens also at less elevated levels. Let us look at two examples of these two situations.

Game 8

Sergio Estremera Panos Jasel Lopez

2365 2179

Groningen 2013 (4)

39. ₩e5??

Until this moment, the experienced IM with White had been playing the game well. However, his last move is a fatal blunder. Black, who seems dead, finds an unexpected resource. Instead, White was winning with 39.單b7! 當g8 (or 39...公g5 40.豐xd5) 40.豐b8+ 當g7 41.豐e5+ 當g8 42.罩b8+.

39...②g7! 40.②h4

40.≌b7 �f5+ 41.ġg4 h5#.

40... ≝e1 41. ≝xd5 ⊘h5+ White resigned.

Game 9 Sicilian Defence

Deva Estevez Sacristan Ignacio Montes Gutierrez

1665 2233

Santisimo Cristo de Candas 2017 (3)

1.e4 c5 2.∅f3 ∅c6 3.d4 cxd4 4.∅xd4 ∅f6 5.∅c3 d6 6.Ձe3

A prepared line which served as a surprise.

6...Øg4 7.≜b5!?

The key move of the prepared variation: White allows the exchange of his e3-bishop for an enemy knight in the hope of attacking along the f-file. It should be said that theory does not approve of White's plan and instead prefers 7. 2g5, with the idea of 7... 4b6 8. 2b5 2d7 9.0-0.

7... **②**xe3 8.fxe3

It was already too late to deviate with 8.公xc6 公xd1 (8...公xg2+!? 9.含f1 bxc6 10.盒xc6+ 盒d7 11.盒xa8 公f4 12.營f3 g5) 9.公xd8+ 含xd8 10.罩xd1 e6 as Black would have the bishop pair in the ending.

8... \(\hat{\partial}\) d7 9.0-0

9...Øe5?!

You can tell that Black is not familiar with the position. The main line is 9...e6! 10.\(\hat{\partial}\) xc6 bxc6

11.e5!? (11.營f3 營f6!) 11... êe7!? with favourable statistics for Black.

10. විf3! විg4

White retains the initiative in the event of 10...f6 11. ②xe5 dxe5 (11...fxe5? 12. ₩d5) 12. ₩h5+ g6 13. ₩e2.

11. බු g 5 ව f 6?!

The correct move was 11... ∅e5, but the rating difference of almost 600 points probably forced Black to avoid the repetition of moves possible in the event of 12. ∅f3.

12.e5!

A very good pawn sacrifice based on Black lag in development.

12...≜xb5

Also unsatisfactory was 12...dxe5
13. \(\hat{\omega}\)xd7+ (13. \(\hat{\omega}\)xf7!? \(\hat{\omega}\)xf7 14. \(\hat{\omega}\)xd7
13...\(\hat{\omega}\)xd7 14. \(\hat{\omega}\)xd7 + \(\hat{\omega}\)xd7 15. \(\hat{\omega}\)b5!

CHAPTER 5

Creativity in chess

Creativity is seeing what everyone else has seen, and thinking what no one else has thought. — Albert Einstein

5.1 Its main features

Alongside this opinion from the brilliant physicist, it is interesting to quote a brilliant painter and a very well-known chess player and creator of several magnificent studies:

Learn the rules like a professional so that you can break them like an artist. — Pablo Picasso

Those of us for whom chess is a hobby, as well as those of us for whom chess is our profession, we are all fascinated by one and same thing: the triumph of a profound and brilliant idea over dull reasoning and the triumph of the individual over the trivial. — Richard Réti

From the many definitions of the term creativity which exist, we can draw two main conclusions:

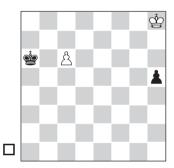

- 1) Creativity results in something new, something hitherto unknown;
- 2) Everyone has this aptitude, but in a different form and to a different extent.

When we apply the term creativity to our game, we can say that the very nature of chess, where exceptions are frequent and seem more abundant than in other human activities, provides a natural training ground for this aspect. In accord with the conclusions already drawn, we can suppose that every player, regardless of level, can be creative, to a greater or lesser extent. It is likely that these two conclusions explain why our game is so attractive and so valuable didactically. There is no doubt that creativity is closely linked to beauty, which in chess is based on the contradiction between the usual and the unexpected.

An endgame study, with its hidden secret, is the greatest expression of beauty in chess. The ability to surprise has several aspects. I should think that at the time many lovers of chess were hugely impressed by the following famous study by Réti.

Game 59
Richard Réti

Endgame study 1922

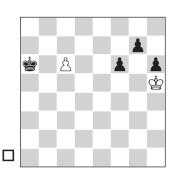

Here the white king follows the spectacular route \$\ddots\$h8-g7-f6-e5, proving that in chess it is possible to kill two birds with one stone.

It is interesting that, six years later, Réti modified it to give us an even greater surprise:

Game 60 Richard Réti

Endgame study 1928

Common sense protests at the stated task: 'White to play and draw'. Nonetheless, by using the same method as in the previous study, where there was just one black pawn on h5, the white king performs a miracle. Clearly the paradox of salvation lies in the peculiar geometry of the chessboard, where for the king the diagonal path is equal to a straight line!

1. 堂g6 堂b6 2. 堂xg7 h5 3. 堂xf6 h4 4. 堂e5 h3

Or 4...\$xc6 5.\$f4.

5.\$d6 h2 6.c7 h1營 7.c8營 With a draw.

5.2 Artistic ideas and practical play

It must be said that even at the highest level, human perception does not always grasp the difference between space in everyday life and space on the chessboard and in particular the variety of routes available to the king.

Game 61

David Bronstein

Mikhail Botvinnik

Moscow Wch m 1951 (6)

57. **⊈**c2??

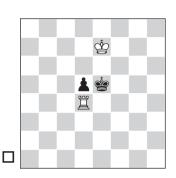

A fatal mistake which loses the game in a simple position. Clearly Bronstein was only counting on the obvious move of the black king to the f3-square, closest to his passed pawn, without realising that there is another route to the f2-square. Instead, there was a draw available with 57.②e6+ 常f3 58.②d4+常f2 59.常a4 e2 60.②c2 e1豐 61.②xe1 常xe1 62.常xa5 常d2.

57...**∲**g3!

White resigned. 57... \$\delta f3? would have allowed a draw. How?

- A) Not 58. 266? e2 59. 24+ \$\delta\$12 60. 2xe2 \$\delta\$xe2 61.c5 (or 61. \$\delta\$b3 b6) 61... a4 62.c4 a3 63. \$\delta\$c3 a2 64. \$\delta\$b2 \$\delta\$d3 65. \$\delta\$xa2 \$\delta\$xc4:
- B) Correct is 58.∅f7! e2 59.∅e5+ \$\displant{\text{def}}\$1 60.ᡚd3+ \$\displant{\text{def}}\$1 61.\$\displant{\text{def}}\$3.

Game 62 **Richard Réti**Endgame study 1929

If in the two previous studies, the paradoxical beauty had its roots in the geometry of the chessboard, in this case the idea is different. To win, White must lose time (!), which is not at all obvious. Suffice it to say that when Réti published this study, the famous GM Rudolf Spielmann declared that no master would be able to find this solution over the board during a game. And, as we shall soon see, an example from modern chess confirms that he was quite right.

1.罩d2!!

1.還d3!! was also winning. However, the obvious 1.還d1? d4 2.當d7 當d5! 3.當c7 當c5 4.當b7 (or 4.還d2 當c4 5.當c6 d3) 4...當c4 5.還c1+ 當b3 only leads to a draw.

1...d4 2. \(\bar{Z}\)d1 \(\bar{G}\)d5 3. \(\bar{G}\)d7 The key idea!

White must keep the opposition. The white monarch waits to see which way the enemy king goes, after which it will head for the opposite side of the pawn.

3...**⊈**c4

If 3...\$e4 then 4.\$c6! \$e3 5.\$c5 d3 6.\$c4 d2 7.\$c3, and wins.

4.堂e6 堂c3 5.堂e5 d3 6.堂e4 d2 7.堂e3

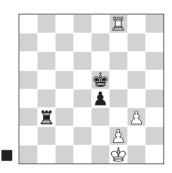

And White wins.

Game 63

Alireza Firouzja Shakhriyar Mamedyarov

akhriyar Mamedyarov 2765

Terme Catez EU-chT 2021 (9)

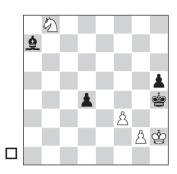

48...**⊈**d4?

49. 할g2 單b7 50. 할h3 할e5 51.g4 할d5 Black resigned.

Game 64 Alexey Troitzky

Endgame study 1910

This study shows us a different kind of surprise. It features a final position where the side with a queen and a pawn is unable to win against only a knight and two pawns, and furthermore, it is his move!

1.5 c6!!

2770

Not 1.₺d7? d3 2.₺f6 Ձb8+! (not 2...d2? 3.g3+ ♚g5 4.₺e4+) 3.♚g1 d2, and Black wins.

1...d3 2.②xa7 d2 3.②b5 d1≝ 4.②c3 ≝d6+ 5.⊈b1

And after the inevitable 20e4 White creates an impregnable fortress.

And, as in the previous cases, it is possible to find several examples

where over the board even very strong players overlook the fact that they have an impregnable fortress.

Game 65 Anish Giri Samuel Shankland

Wiik aan Zee 2019 (11)

2783 2725

45.b6!?

A little trick: in the event of 45. \$\delta c5\$ b6! the draw is obvious. The move played in the game makes no difference, but here to everyone's surprise Black resigned, in a theoretically (!) drawn position. The right way would have been to move his king towards the c8-square, which saves the game, no matter how many pawns White has, for example: 45...\$\delta d6 46.\$\delta g4 \$\delta d7\$ 47.\$\delta xh3 \$\delta c8\$ and White cannot dislodge the black king from his fortress.

5.3 Rashid Nezhmetdinov

Fortunately, there have always been (and still are to this day) players who seek to do more than just gain points. We know perfectly well that there are not many of them and, bear this in mind (!), they are not the strongest (!), but they are the players who enhance our game with their brilliance. Amongst past, although not too distant past, players with an original style, the name Rashid Nezhmetdinov stands out, a player little known in the West, as he almost never played outside the former USSR. Players with an original style are often also original in their daily life. And Nezhmetdinov was exactly that: several times chess champion of Russia and, furthermore, runner-up in the Russian draughts championship (!); he was a teacher of mathematics and the possessor of a photographic memory, capable of reproducing in detail a page he had just read. He was also recognised as a trainer emeritus of the USSR. Rashid was the inventor of the sacrifice of two minor pieces for the queen. For example, in the famous game Bobotsov-Tal, 1958, which we will look at further on, the future World Champion took as a model a game played by Nezhmetdinov two years earlier. In the impressive game Nezhmetdinov-Chernikov, 1962, Rashid demonstrated this type of sacrifice in the Accelerated Dragon Variation of the Sicilian Defence. It is notable that the personal score between Tal and Nezhmetdinov was 3-1 in favour of Rashid, but even more striking was that his three wins were all awarded the brilliancy prize! I can personally

testify to the respect in which Tal held Nezhmetdinov. It is worth mentioning that the Soviet artist Galina Satonina dedicated a tryptich of paintings to the following game, one of the most brilliant in the history of chess.

Game 66 Old Indian Defence Lev Polugaevsky Rashid Nezhmetdinov

Sochi 1958

1.d4 �f6 2.c4 d6 3.�c3 e5 4.e4

The usual move here is 4. ∅f3. Nevertheless, the text move has its supporters, since it leads to a sort of a Maroczy structure, although with a black pawn on c7 instead of e7.

The main snag with this moveorder is that it loses time, as Black's response demonstrates.

4...exd4 5. ₩xd4 \(\tilde{2} \) c6 6. ₩d2 g6 7.b3 \(\tilde{2} \) g7 8. \(\tilde{2} \) b2 0-0 9. \(\tilde{2} \) d3 \(\tilde{2} \) g4

This move underlines Black's lead in development and indicates that the dark squares constitute the area of Black's domain.

10. නිge**2**?!

An inaccuracy that allows Black to seize the initiative. Instead, White could have kept the balance with 10. 15 2ge5 (or 10... 46 11. d1

10... 營h4!?

This early queen sortie matches Nezhmetdinov's dynamic style of play. Nevertheless it was more precise to play 10...公ce5! 11.总c2 營h4 (11...总h6!? 12.f4 營h4+ 13.公g3 f5!) 12.營f4 (12.公f4? 总h6) 12...f5 13.營g3 營xg3 14.hxg3 fxe4 15.公xe4 总f5 (15...b5!?) 16.0-0 国ae8, with the better game for Black.

11.മിg3?

The correct continuation was 11.g3! 營h6 12.營xh6 公xh6 13.公f4 皇g4
14.h3 皇f3 15.0-0 公e5 16.皇c2, with equal play.

11...⊘ge5

Black would have had a dangerous initiative after 11...f5! 12.exf5 ∅b4.

12.0-0

12...f5

In the event of 12...②g4!? 13.h3 ②xf2 14.豐xf2 (14.罩xf2!? 豐xg3 15.②e2 豐h4 16.皇xg7 當xg7 17.②f4) 14...皇d4, Polugaevsky was planning to sacrifice his queen for two minor pieces, in the style of Nezhmetdinov: 15.營xd4! 公xd4 16.公台5 營xg3 17.皇xd4, which would have been a good practical decision even though the engine considers that the compensation is insufficient after 17...f5! 18.宣f3 營h4 19.公xc7 fxe4 20.宣xf8+ 含xf8 21.皇e2 宣b8 22.皇xa7 營g3 23.皇xb8 皇xh3 24.皇f1 e3 and Black's advantage is clear.

A good alternative would have been 14...≜e3+!? 15.\\$\displant 14.

15. 2 ge2 g5 16. 2 d5 g4

17.g3!

The best defence, as 17. △xc7?? g3 18.h3 ≜xh3! loses; and 17. △exf4? ≜xf4 18. △xf4 gxf3 19.g3 ∰g4 leads to a clear advantage to Black.

17...fxg3!?

18.hxg3 營h3 19.f4!

19...**≜e6**‼

After the obvious 19...②f3+? 20.\\$f2 \\$\\$\hat{\texi}\text{\text{\text{\text{\text{\te}\text{\text{\text{\text{\text{\text{\text{\text{\text{\text{\tex

20. gc2?!

20...罩f7?!

It would not be at all easy to calculate the following variation leading to a big advantage to Black: 20... 盒xd5! 21.營xd5+ (or 21.cxd5 置xf4! 22.公xf4 營xg3+ 23.協h1 盒xf4 24.置xf4 營xf4 25.dxc6 營h6+ 26.當g2 營h3+ 27.當g1 公f3+ 28.當f2 bxc6) 21...置f7 22.營e6 公d8! 23.營d5 c6 24.營xd6 公f3+ 25.含f2 營h2+ 26.當e3 盒f8!.

21. **\$**f2

It was more precise to play 21. ≜xe5! ②xe5 22. \(\delta \) f2.

At first sight, White is winning a piece, but Nezhmetdinov had his next move in mind when he played 19... \(\hat{2}e6!!\). Instead, 24.a3! was correct.

24... 罩xf4!! 25. 罩xh2

After a long reflection, Polugaevsky came to the conclusion that his position was already lost and that the game would soon be known to the entire chess world. 25. 2xf4 2xc2+ lost immediately.

25... If 3+ 26. In degree 27... If 3+ 26. I

28...\$\c4 or 28...\$\ec6.

27...c5+ 28.dxc6 bxc6 29.Ձd3 ∅exd3+ 30.♚c4 d5+ 31.exd5 cxd5+ 32.♚b5 ੂੱb8+ 33.♚a5 ∅c6+

White resigned. After 34. \$\delta a6\$, Black can mate with three different moves.

Game 67 King's Indian Defence Milko Bobotsov Mikhail Tal

Varna tt 1958

It should be said that this game resulted from a wager in which Tal upheld the soundness of the queen sacrifice made by Nezhmetdinov in the following game, while his opponent held the contrary opinion: 9.dxc5 dxc5 10.0-0-0 營a5 11.貸b1 b5 12.夕d5

12...公xd5!! 13.豐xa5 公xe3 14.罩c1 公xc4 15.罩xc4! bxc4 16.公c3 罩b8 with a double-edged game, Zamikhovsky-Nezhmetdinov, Kharkov 1956.

9... **營a5 10. 含b1 b5 11. ②d5 ②**xd5!! **12. 營**xa5 **②**xe3 **13. 罩c1**

In the event of 13.\(\bar{2}\)d3!? \(\Delta\)xc4
14.\(\bar{2}\)e1 cxd4! 15.\(\Delta\)xd4 \(\Delta\)c5 Black
also has very good compensation
for the queen.

A painting by Galina Satonina

13...**⊘**xc4

The same queen sacrifice, but without including the exchange of pawns on c5.

14. **罩xc4?!**

The presence of pawns on d4 and c5 changes the situation and for this reason it was better to play 14.豐e1!, e.g. 14...cxd4 15.心f4 心e3 (15...心de5!?) 16.罩c7 e5 17.心d3 心f6 18.g4 d5 19.g5, preventing the direct attack against his king.

14...bxc4 15.62c1?

White could have weakened Black's attack by returning the material:

15.②f4! ②xd4 16.③xc4 罩b8 17.b3 ②b6 18.罩c1 ②e3 19.②d5! ②xd5 (19...②xc1? 20.②xe7+ 曾g7 21.豐c3+ f6 22.③xc1) 20.②xd5 ②xc1 21.③xc1.

15...**≦**b8 16.**≜**xc4 **⊘**b6

It was more precise to play 16... \(\hat{2}x\) xd4! 17.b3 \(\hat{0}\) b6 18. \(\hat{2}x\) xa6 \(\hat{4}\) a8 19.\(\hat{2}x\) b6 \(\hat{2}x\) a6 20.\(\hat{4}\) d1 \(\hat{2}\) f6 21.\(\hat{4}\) d2 \(\hat{4}\) fb8 22.\(\hat{2}\) c6 c4.

17. **\$b3?!**

17.≜xa6! ≜xd4 18.⊘b3 presented greater resistance.

19...c4

Now the black attack is decisive.

20. **≜c2 c3 21.** ₩d3 cxb2 22. **△**d4 **≜d7 23.** ℤd1 ℤfc8 24. **≜b3 △**a4 25. **≜**xa4 **≜**xa4 26. **△**b3 ℤc3 27. ₩xa6

逾xb3 28.axb3 罩bc8 29. 響a3 罩c1+ 30.罩xc1 罩xc1+ White resigned.

5.4 Two games by Konstantin Chernyshov

Another representative of the creative style, which is rather uncommon nowadays, is the Russian GM Konstantin Chernyshov. In his private life he is also quite an original character. For example, he wrote stories for his children and gave them as gifts to his friends, he gave free chess lessons in his native city of Voronezh and joined the Communist party, which in today's Russia is not well viewed. Although he has not played much recently, devoting more time to his work as a trainer, he continues to compete. And when he does, he gives his all in each game, saying that for him chess is a form of artistic self-expression. He gets very angry about rigged games!

Let us look at two of his games, where he won in a rather unusual way against top-rank GMs. It is curious that before starting the second game he had placed a typical Soviet-style red flag at the side of the board.

Game 68 Richter-Veresov Opening

Konstantin Chernyshov 2536

Alexander Beliavsky 2638

Ohrid 2001 (4)

1.d4 Øf6 2.Øc3!?

A rather uncommon opening against a player with much greater opening knowledge than Chernyshov.

2...d5 3. **2g5** g6 4. **2xf6** exf6 5. **2d3**!? At first glance this move is just based on a cheap trick: if 5... **2f5**? 6. **2b5**+.

5...f5

Of course, there were several alternatives:

- A) 5...皇g7 6.e4 dxe4 7.豐xe4+ 堂f8!? (or 7...豐e7 8.豐xe7+ 堂xe7 9.0-0-0 with equality) 8.0-0-0 位c6 with double-edged play;
- B) 5...c6!? 6.e4 h6 7.exd5 0-0!?, with good compensation for the sacrificed pawn.

What move to make now? It would be unlikely that Chernyshov's next move would occur to me, especially when playing against the great Alexander Beliavsky, four-time Champion of the USSR.

6.\g3!? \g7

10.公c3 營b6 11.0-0-0 0-0-0 with a slight advantage to Black thanks to the bishop pair.

7.**夕**b5!?

As Chernyshov himself commented, after this move Beliavsky's face was a picture. It seems as if the white pieces are being moved by a beginner...

7...Øa6

8.**₩a**3

Incredible! Three of White's first eight moves have been with the queen. The desire to punish White's play is obvious, but the question is, how?

8...c5

Black had several options, but
Beliavsky chooses the more
aggressive, probably with the
intention of punishing his
opponent for such extravagant
play. Preferable was 8... e7!?
9. xe7+ xe7 10.0-0-0 c6 11. c3
f4; or 8... f4!?; or 8... f8!?, a move
recommended by Chernyshov.
9.dxc5 0-0 10.e3 e7 11. d6!
Without developing any pieces or
castling, Chernyshov continues
his unusual play. Nevertheless,
the knight on d6 supported by the

c5-pawn is very strong and Black has to continue the tactical struggle, which, however, leads to an ending which is advantageous for White.

11...**∮**xc5

11...d4?! fails to equalise due to 12.≜xa6 bxa6 13.0-0-0 dxe3 14.∰xe3.

12. \wxc5 \\ d8

Of course, 12... ≜e5?? loses to 13. △e4!.

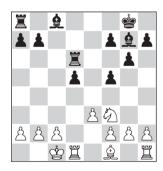

13.0-0-0

13. ∅xb7? ∰xb7 would have led to an overwhelming advantage to Black.

13... **營xd6?!**

13...罩xd6? 14.罩xd5 is inadvisable, since it would lose a pawn without compensation, e.g. 14...皇f8 15.罩xd6 豐xd6 16.豐xd6 皇xd6 17.②f3; according to the engine, Black could fight for the initiative with 13...豐f6! 14.c3 罩xd6, e.g. 15.罩xd5 罩xd5 (15...罩c6!?) 16.豐xd5 皇e6!?.

14. 豐xd6 里xd6 15. 公f3

The situation has stabilised and White has some positional advantage in view of the damage to the opponent's pawn structure. Black's next move is the best attempt at counterplay.

15...b5! 16.40d4

In the event of 16.\(\hat{o}\)xb5? \(\beta\)b6 17.\(\beta\)xd5 \(\hat{o}\)e6, the advantage would have passed to Black.

16...b4 17.\(\textit{2}\)e2 \(\textit{2}\)e6 18.\(\textit{2}\)d3 a5 19.\(\textit{2}\)hd1 a4 20.\(\textit{2}\)f3 \(\textit{2}\)a5?!

It was better to play 20... 28!? 21.a3 26 22.axb4 23.2a3 f4, when Black would still have some counterplay.

21.a3!

Forcing the exchange on a3, which creates another accessible weakness on a4

21...bxa3 22.\(\bar{z}\)xa3 \(\bar{z}\)b6?!

It was more tenacious to play 22... \(\bar{2}\) da6 23.c3 \(\hat{2}\) f8 24. \(\bar{2}\) a2 \(\hat{2}\) d7. **23.c3** \(\hat{2}\) f8

Or 23... 🖺 aa 6 24. 🚊 e 2 🖺 a 8 25. b 4.

24.b4!

After this advance, it is difficult to salvage the black position.

24... \(\begin{aligned} \begin{aligned} 24... \(\begin{aligned} \begin{aligned} \begin{aligne

25. ♠xe6? would be a mistake; for example, 25...fxe6!? 26. ♣xd5 (26. ♣d2!) 26... ♣c8! 27. ♣d7 ♣xb4, with equality.

A pawn up and with a powerful bishop on d5, White leaves Black with a hopeless task.

28... 董e8 29. 董f1 董e7 30. 蛰d3 皇g7 31.e4 皇e8 32. 董a2 董c7 33. 董b1 皇f8 34.b5 a3 35.c4 皇c5 36. 公c2 董a7 37. 董ba1 皇g7 38. 董xa3! 皇xa3 39. 董xa3 董c7 40. 公d4 董b8 41. 董a6 雲f8 42.b6 董c5 43. 雲c3 Black resigned.

Game 69 Trompowsky Opening
Konstantin Chernyshov
Alexander Grischuk

2531 2724

Sochi 2005 (4)

1.d4 ②f6 2.Ձg5 ②e4 3.Ձf4 c5 4.f3 ₩a5+ 5.c3 ②f6 6.d5

The previously popular 6. ②d2 cxd4 7. ②b3 lost some of its attraction due to 7... ₩b6 8. ₩xd4 ②c6!.

6... ₩b6 7.e4!?

The quiet retreat of the bishop from g5, 7.\(\hat{o}\)c1, which is the most played move in the Mega Database as well as the one preferred by the engine, is not for players like Chernyshov.

9. **Qc7!**

This original move, which aims to hunt down the enemy queen, was probably overlooked by Grischuk.
9...g6 10. □c1 ⊎e3+ 11. ②e2 ②a6?

11...d6 12. ∅c4 ∰h6 13.e5 ∅a6 14. Ձa5 dxe5 leads to a position where White has an initiative for the sacrificed pawn.

12.夕c4 營h6 13.皇f4 營g7

It is not very usual to see a position with a 'fianchettoed queen' in the games of the world's best players.

14.營a4 g5 15. êe5 g4 16.f4 營g6

17. ②g3 查g8

18.*∮*)e3

The engine gives White a decisive advantage here, which means that in only ten moves of his own, the creative player has managed to obtain a completely winning position against a player who has been one of the best in the world this century.

18...මb4 19.a3 විc6!?

A decision in the style of the game Averbakh-Spassky, Leningrad 1956, analysed in Chapter 6, but it does not work here.

20.dxc6 dxc6 21. \(\partial e2

There was an easier win with 21. 全xf6! 豐xf6 22.e5 豐g6 (22...豐e6 23. 區d1) 23. 公d5.

21...Ød7 22.0-0 Øxe5 23.fxe5 \$h6 **≜xe3+27. ₩xe3 ₩g528. ₩c3** And White realised his advantage: 28...罩d8 29.公f5 h5 30.a4 h4 31.a5 **豐xf5 37. 豐xh4 罩e8 38. 罩f1 豐xe5** ₩e1+ 42. &f1 ₩e5 43.g3 Ze6 44. 營h4 b5 45. 營d8+ 含g7 46. 營d7 49. ♠d3+ ♠h8 50. 罩e4 ₩d5 51. ₩c3 ₩d6 52. 4f4 \$g7 53. \$f2 c4 54. \$e4 57. \$\dagge xd4 \quad \quad a6 58. \quad d5 f6 59. \quad \quad g4+ \$\dot{\phi}\$h8 60.\$\dot{\phi}\$c5 \$\textstyre{\pi}\$xa5 61.\$\dot{\phi}\$b4 \$\textstyre{\pi}\$a1 62. \$\document{\psi}\$xb5 c3 63. \$\overline{\psi}\$c4 \$\overline{\psi}\$c1 64. \$\document{\psi}\$b4 **Ic2** 65.h4 a5+ 66.\$b3 Black resigned.

5.5 Two modern games

In modern chess, various opening novelties are born with the participation of the computer; even so, its involvement is not always decisive, leaving room for human creativity.

The next two games, the most memorable from 2018 and 2019 respectively, are good examples of this. In the first one the player with White hardly knew more than the first 14 moves, while in the second, in the words of the winner himself, he had prepared in great detail and in great depth.

Game 70 Petroff Defence

David Paravyan Saveliy Golubov

2630 2470

St Petersburg 2018 (6)

1.e4 e5 2.∅f3 ∅f6 3.∅xe5 d6 4.∅f3 ∅xe4 5.d4 d5 6.Ձd3 Ձd6 7.0-0 0-0 8.c4 c6 9.∰b3!?

9.42c3 is the main line.

9...dxc4 10. ≜xc4 ②d7 11. ≝e1 ②df6 12. ∅ bd2!?

According to Paravyan, he did not deploy this knight on its more usual square, as he did not like 12. 2c3 2xc3 13.bxc3 b5 14. 2d3 2e6; he was unconvinced by the typical sacrifice 15. 2xe6!? and it seems that he was right, as the engine gives equality.

12... 公xd2 13. **业xd2 豐**b6

14. ₩d3!

Everything indicates that from now on all was improvised at the board. In the event of 14.豐c2 皇g4 15.②e5 豐xd4 16.皇c3 豐f4 17.g3 豐f5 18.皇d3 豐h5 19.②c4 罩fd8, Stockfish gives full equality.

14... **營xb2!?**

Accepting the challenge. The balance could have been maintained with 14... £g4, e.g. 15. ∅e5 **¾ad8** 16. **½**c3 **½**c8 17.a4 ∅d5 (17...a5?! 18. **¾d2**) 18.a5 **¾c7** 19.a6 b6.

15. Zab1 豐a3 16. 豐c2 公d5?

This obvious move is a decisive mistake, as David's brilliant play demonstrates. The correct move was the rather dubious-looking 16... b5 17. \(\Delta b3 \) \(\Begin{arr} \Bar{4} \Bar{2} \

17.罩b3!

According to Paravyan, it was at this point that he foresaw his 23rd move.

17... ₩a4 18. \(\hat{2}\)xd5! cxd5 19. \(\hat{Q}\)g5 g6 20. \(\hat{Q}\)xh7 \(\hat{Q}\)f5

24. ₩c7!!

24... âxh6

24... If e8 loses in the same way as in the previous note: 25.g5+ 26. d6+; if 24... xc7 25.g5#.

25. **e**5+ **e**g5 26.h4+ **e**xh4

Or 26...\$\div xg4 27.\$\bar{\bar{\pi}}g3+ \div h5 28.\$\bar{\bar{\pi}}e2+ \div xh4 29.\$\div g2.

27.四h3+! 曾g5 28.豐e7+ Black resigned.

Game 71 Queen's Gambit Declined

Daniil Dubov Anish Giri

Moscow 2019 (1)

1.d4 **②**f6 2.c4 e6 3.**②**f3 d5 4.**≜**g5 dxc4!?

Obviously, Black has many options here, but this is the only move which can cast doubt on White's fourth move.

5.e4 b5 6.a4 c6 7.6 c3 b4

The main alternative is 7... 數6!?, e.g. 8. ②e2 ②bd7 9.d5!? exd5 10.exd5 b4 11.dxc6 豐xc6 12. ②b5 ②c5 13.0-0 ②b7 14. ②bd4, with good compensation for the sacrificed pawn, Mamedyarov-Kasimdzhanov, Khanty-Mansiysk 2019.

8.**公b1 <u>\$</u>a6**

Defending his extra pawn.

9.e5 h6 10. £xf6

According to the engine, Black has the better game in the event of 10.\(\hat{L}\) h4 g5 11.exf6 gxh4 12.\(\hat{L}\) bd2 c3.

10...gxf6 11.exf6 c5 12. ∅bd2

12...c3?!

2690

2787

According to Dubov: 'The first mistake of the game. I knew that 12...公c6! is the move and it's OK for Black, but he is down to only moves in most of the lines that follow: 13. 皇xc4 皇xc4 14. 公xc4 豐xf6 15. 豐e2 公xd4 16. 公xd4 cxd4! 17. 公e5 d3! 18. 豐e4 冨c8 19. 公xd3 皇d6, with equality.'

13.bxc3 bxc3 14. Øe4 cxd4

15. **身**b5+!

Dubov's note to this move is very instructive: 'My general approach for these crazy kind of positions is quite simple: as I know I'm not capable of calculating everything, I'm trying to play the move I like during the first seconds of thought.' I should add that I, and surely many other trainers, give the same advice to pupils. The problem is that our intuitive grasp deceives us much less than complicated calculation, which is very difficult for our human brain.

16...d3! was necessary.

17. **營xd4 營xb5 18. 公xc3?**

The engine considers that after 18. ②e5! ②d7 19. 罩a5! 營b1+ 20. 含e2 營b2+ 21. 含f3 ②xe5+ 22. 營xe5 White's advantage is around +5.00, i.e. decisive.

18...**\$**b4!

19.0-0-0!?

A spectacular move, although it is unclear who is better here.

19...\₩a5?

20. Øb5! Øa6 21. ₩d7+ \$f8

22. \$b1!

Another instructive comment by Dubov: 'In this crazy position where both kings are vulnerable I deduced that the h8-rook cannot come into play, so I need to protect my king first and then go on the attack and win.'

22... \@a3?

22... \(\hat{2}\)c5! would have been more tenacious.

23.\(\mathbb{Z}\)d3!

The key idea! Black can give numerous checks but is unable to prevent the transfer of the white king to the kingside, which will decide the battle.

23... wb4+ 24. c2 wa4+

Black loses a piece after 24... \$\begin{align*}
25. \$\div d1 \begin{align*}
\text{w} xf6 (25... \$\div g8 26. (\Div xa3) \\
26. (\Div xa3).

30. 營d4! 罩h7

If 30... 全c5 then 31. 營h4 wins.
31. 營f4 全c5 32. 公d4 營a2 33. 互1d2 營d5+ 34. 含e2 全b4 35. 公dc6 營c5 36. 公e7+ 含h8

And Black resigned simultaneously.
